

## SEE-SAY® TRUSTED IDENTITY ASSURANCE™ For the Enterprise

### Identity Verification for a Remote Workforce

Securing access to business-critical data and applications is essential for businesses of any size, and current methods for user authentication in the enterprise are weak.

- **Traditional username/passwords** can be shared, copied, stolen and or hacked.
- **Two Factor Authentication** involves an extra login step and integration involves third party services or hardware. This creates a dependency issue, as the enterprise has no means of controlling these external services should a malfunction occur.
- **Facial, Fingerprints and Eye scans** can suffer from poor image quality, fingerprint distortions, light effects, facial changes, distance from camera which can impact readability.
- **Token based authentication** can be lost, stolen, and have code expiration times.

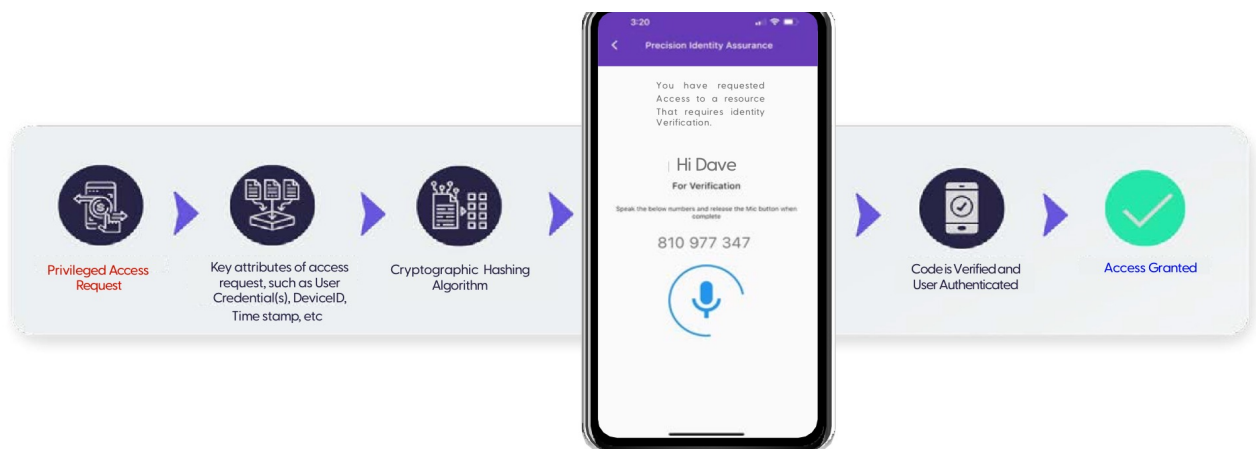

Users want an easy to use, secure, password-free authentication access and businesses want a cost effective, secure, accountable, and accurate workforce authentication compliant with privacy laws – CCPA, GDPR, BIP.

**See-Say® Trusted Identity** combines voice biometric authentication and cryptographically generated numeric digits derived from the details of the privileged access request to create Trusted Identity Assurance™ – an irrevocable record of the identity of the individual performing the legitimate access request. Key features are:

- **Irrevocable Transaction and Identity Assured**
- **Frictionless Experience**
- **Secure User and Access/Transaction Workflow**

See-Say® Trusted Identity Assurance™ can be easily deployed via APIs from any client application or service.

### How See-Say® Works: Enrolled User

# Use Cases

Improve security posture for system access and authorization

Reduce risks from 3rd party access

Control access privileges for users

Achieve IT compliance with an unalterable audit trail

## See-Say® Trusted Identity Assurance™ - Benefits

Confidence in Identity, Security, Privacy & User experience

Smooth User Experience

Privacy compliant

Extra layer of security

Cost savings

Theft-proof authentication

Omni channel deployment = greater adoption

### About ValidSoft

ValidSoft is a leading voice biometrics software company with a long history of innovation in voice authentication and biometrics. Our technology is at the forefront of the industry and is built using active/dynamic active, passive, and continuous passive voice-based authentication, guaranteeing that the speaker is who they are, always. Our solutions are designed to counter Lapsus\$ and Social Engineering type attacks and render identity credential theft useless – If it's not the genuine user's voice speaking the security credential then it's a hack attack. ValidSoft's EuroPriSe® privacy seals ensure 100% compliance with EU GDPR and all other leading global Data Protection and Data Privacy laws like HIPAA, Digital Identity Guidelines, Vectors of Trust, Federal Identity Program Guidelines, etc. ValidSoft is consistently recognized by third-party analyst firms as a market leader.
